# GAME DESIGN

## GENERAL GAME ELEMENTS

The default gamesize is 960x630, and comprises two main elements—video game area and the game panel area.

### Video game area

The main game reels and the Free spin reels are displayed in this upper area. In addition, the PAYTABLE button and information about the maximum possible coin win can be shown.

### Game panel area

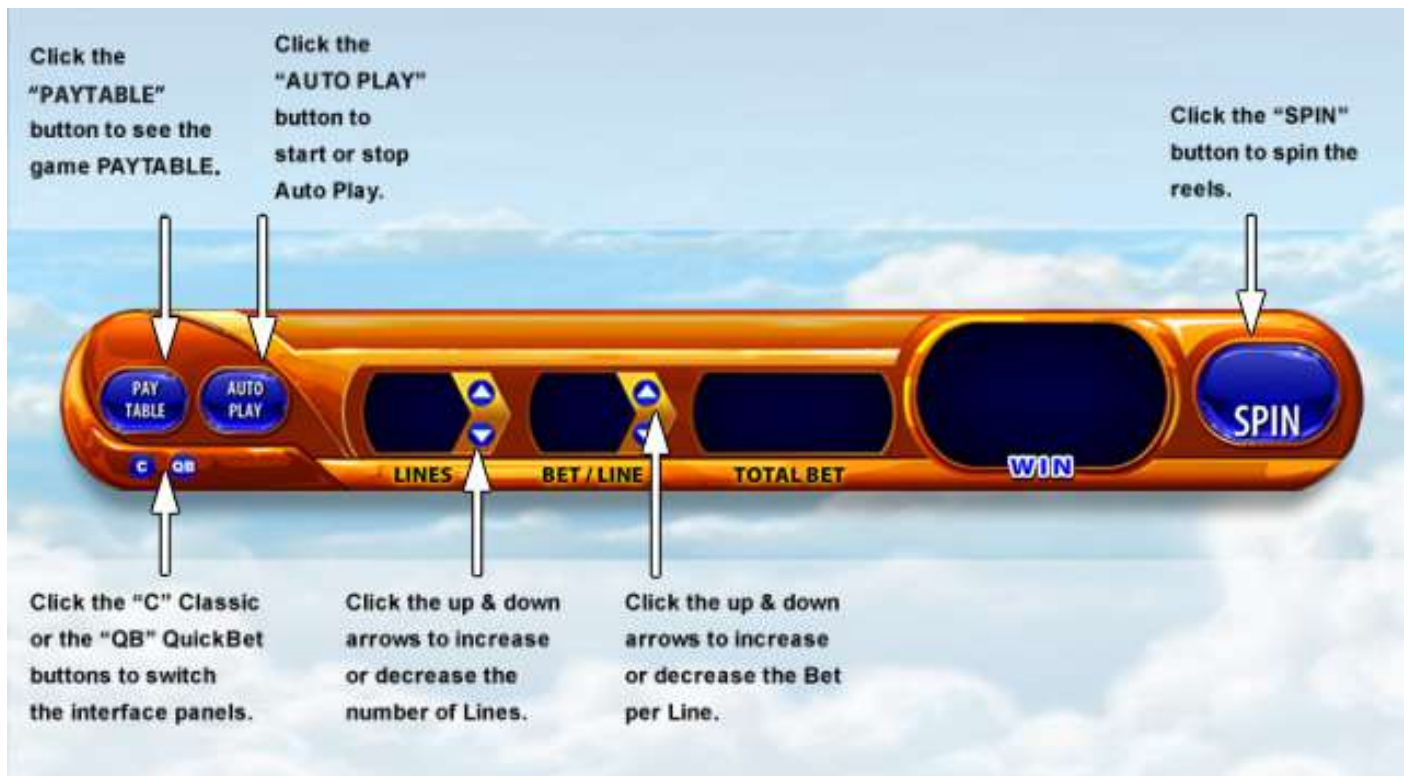

The game panel area at the bottom houses the buttons for the current bet per line, the current number of bet lines and the current total bet value. This area also contains the main game buttons to spin the game, start the auto play, open the payable and switch between Classic style and QuickBet style

### Classic vs Quickbet

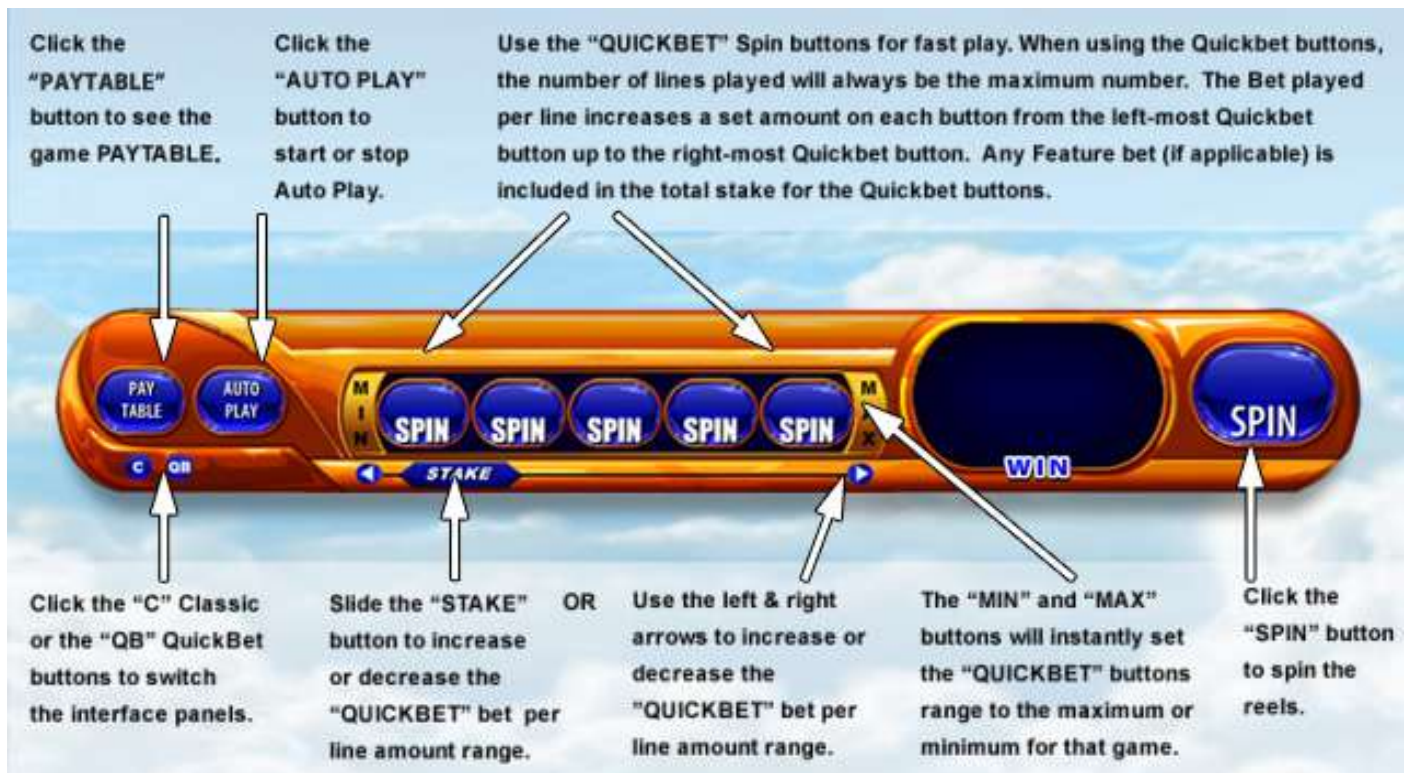

The Game Panel area offers 2 ways to manage bet levels for players. They can either choose the Classic style which gives players the option of choosing number of lines and their bet level, which is the most common way to place bets in online Casino games or the QuickBet style which offers fast play with a single bet amount and always plays the maximum number of lines. The average Casino player plays all lines, minimum bet.

## SCATTERS AND FREE SPINS

The game features scatter symbols, giving the player a chance to enter the Free spins feature.

- **Free Spins:**  
The number of Free Spins is based on the number of scattered symbols.
- **Free Spin Feature:**  
When 3 or more scattered symbols (Kronos Golden Winged Symbol) appear in any position, Free Spins are awarded based on the number of scatters. The Free Spins are played at the same bet level and with the same number of bet lines as the game that triggered the Free Spins. A counter is presented that informs the player how many free spins remain.
- **Re-triggered Free Spins:**  
During Free Spins, 3 or more scattered symbols can add additional Free Spins to the amount remaining.

## WILD SUBSTITUTION

Wild symbols substitute for any other symbol except scatter symbols.

## PAYTABLE

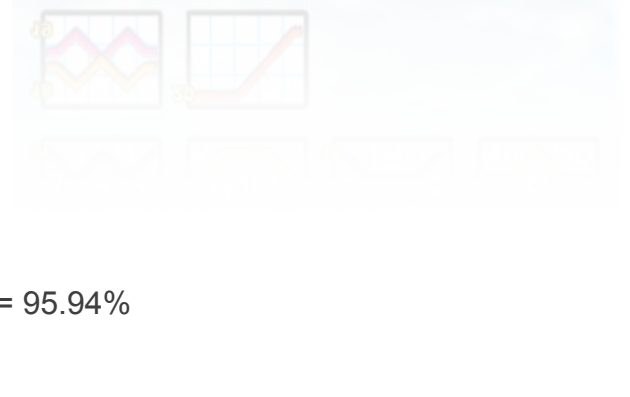

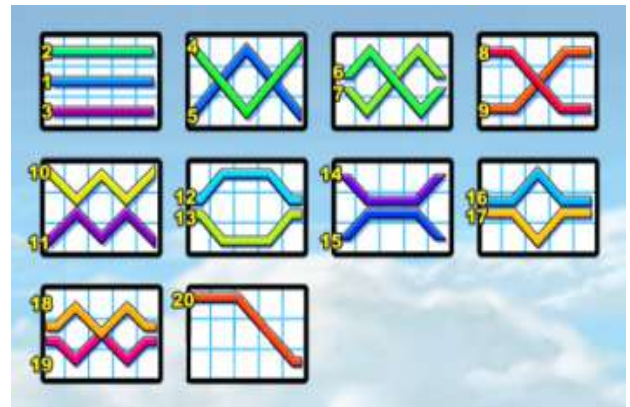

The following lines can contribute to wins. A win can occur on any or all of these lines. Wins on multiple paylines are added together.

Total line bet must be divided equally between each active payline; therefore, all total bet amounts are not available.

The total bet is the number of lines multiplied by the cash bet on each line.

Only active paylines can register wins.

Malfunction voids all pays and plays. Return to player = 95.94%
